

Society for Pediatric Urgent Care
Quality Improvement/Research Committee

4/30/2022

The Committee for Quality Improvement and Research is dedicated to growing the field of urgent care medicine by supporting clinical research, systems analysis and evidence-based care.

- The committee identifies key areas of interest to develop QI projects and MOC offerings available to SPUC members
- The committee is integral in promoting research and scholarly activities through review of poster presentations for SPUC's Annual Conference
- The committee is dedicated to systems-level research and partnering with members to provide data around operational metrics such as throughput and transfer rates

By virtue of the breadth and variety of what we see in pediatric urgent care, the opportunities for research and QI are tremendous. The committee works with all disciplines and other committees to help foster the goals of all SPUC members, SPUC committees, and the SPUC Board.

SPUC's QI/Research Chair will be appointed by the President subject to approval by the Board. The Chair is responsible for scheduling committee meetings, developing agendas and content, written summaries of committee meetings and all communication with committee members. The Chair reports to the Board Liaison any updates or requests for Board approval or assistance prior to each of the Board of Directors meetings.
